CE The CE mark guarantees that a product is safe to use and complies with all safety precautions. CE stands for Conformité Européenne (European Conformity) and is mainly found on electronic equipment, safety equipment, construction products and medical equipment.

1000026121

The glass fork symbol guarantees that products have been tested in accordance with European legislation and approved for food contact. The symbol is mandatory on products used for food contact.

CAT III

Third-party type approval is required for all Category III personal protective equipment (PPE) products. The showing of the CE logo for chemical protective gloves requires that tests are carried out in accordance with test standards specified in EN ISO 374-1: 2016 + A1: 2018 - such as EN 16523-1: 2015 + A1: 2018 to determine the resistance to the permeation of chemicals. The results of this test determine the relevant pictogram symbols that can be used on the packaging and labeling.

LATEX

The product contains latex.

EN ISO 374-1:2016 +A1:2018 Type B
KMO

The standard specifies the requirements for protective gloves against chemicals and microorganisms. Type B has been tested for a permeation time of at least 30 minutes with the chemicals sodium hydroxide 40%, nitric acid 65% and ammonia 25%.

EN ISO 374-5

This standard specifies the requirements and test methods for protective gloves intended to protect the user against micro-organisms.

EN388:2016
2010X

The EN 388 pictogram shows that the glove is certified and approved for protection from mechanical risks. After a test, gloves are assigned values for the individual risk areas, which indicate test results for wear, blade cut resistance, tear resistance and puncture. The values are from 1-5 or 1-4, with 4 or 5 being the highest value. In the future, the cutting strength will also be divided into how many newtons the glove can withstand. This is indicated by the letters A - F, where F is the highest (3 kg+) and A is the lowest (200 - 499 grams).
